INDEXUL

substanțelor active utilizate în produsele de protecția plantelor

Produsele de protecția plantelor au în compoziție una sau mai multe substanțe active, cu acțiune specifică față de un anumit agent de dăunare și diferite substanțe de formulare. Acest index cuprinde substanțele active (s.a.) cunoscute pe plan mondial, implicit în Uniunea Europeană și România.

Conform publicației „The Pesticide Manual”, ediția a 16a, editată de BCPB (British Crop Production Council), compendiumul mondial, care din anul 1968 (aparitia primei editii a manualului) urmărește substanțele active (s.a.) care se găsesc în produsele de protecția plantelor, se constată că, în prezent, pe plan mondial se produc și se utilizează în fabricarea produselor de protecția plantelor, 920 de substanțe active. La acestea se adaugă încă 710 de s.a. istorice (retrase în decursul timpului), în total, existând 1630 de substanțe cunoscute în prezent.

Indexul cuprinde cele 900 de s.a. recente, dar și unele istorice, în total 1397 s.a., substanțe care se regăsesc și în baza de date a Uniunii Europene (EU Pesticides database), respectiv, substanțele active aprobate, utilizate pentru producerea produselor de uz fitosanitar în UE, precum și cele omologate în România.

Se constată următoarele:

1. 277 s.a sunt aprobate în UE, ceea ce reprezintă 30% din cele care se produc în prezent pe plan mondial. La acest număr se adaugă 47 de s.a. care se află în prezent în lucru (pending) în UE.
2. 198 s.a. sunt omologate în România, ceea ce reprezintă 71% din cele aprobate în UE și aprox. 20% din cele actuale de pe glob.

În prezent, în Uniunea Europeană, este în curs de desfășurare un proces sever de revizuire a s.a., fiind retrase nenumărate dintre acestea, astfel, în ultimii 5 ani numărul s.a. a scăzut de la 490, la 277). În România, Comisia Națională de Omologare a Produselor pentru Protecția Plantelor are obligația de a transpune hotărârile Uniunii Europene, astfel, numărul

s.a. s-a redus și în țara noastră, în ultimii 5 ani fiind retrase din practica agricolă 30 de substanțe active, dintre acestea amintim următoarele: bifenthrin, chlorothalonil, chlorpyrifos, chlorsulfuron, clothianidin, dismedipham, dimethoate, diquat, glufosinate, iprodione, isoproturon, methomyl, picoxystrobin, propiconazole, propineb, quizalofop-P, thiacloprid, thiamethoxam, thiram, triadimenol, substanțe cu utilizare largă, a căror retragere are un impact major. Deși au fost retrase din uz un număr foarte mare de s.a., s-au omologat doar 3 s.a. noi, dintre care amintim cyantraniliprole.

În indexul nostru am respectat scrierea după numele comun internațional, scriere care este utilizată, în prezent, în toate listele și bazele de date internaționale. Indexul este actualizat cu datele cunoscute până la data de 20 aprilie 2020.
